## 企业简介 Introduction

公司成立于2014年，总投资金额1800万人民币。公司拥有国外进口ROLLOMATIC(罗曼蒂克)、makino seiki (牧野)、SAACKE (萨克)、WALTER (瓦尔特)、VOLLMER (孚尔默) 等世界顶级数控磨床，德国卓勒ZOLLER (genius 3)、PJ1000、500倍显微镜、500倍刃具外观检测仪等检测设备。

产品广泛应用于模具、冶金、医疗机械、电子产品及机械设备等领域。

Our company was established in 2014 with a total investment of 18million RMB. We has imported ROLLOMATIC(Romantic), Makino Seiki(Makino), SAACKE(Sark), WALTER(Walter), VOLLMER(Vollmer) and other world's top CNC grinding machines, German Zoller(Genius 3), PJ1000 microscope, 500X Cutting tool appearance detector and other testing equipment.

Products are widely used in mold, medical machinery, electronis products and mechanical equiment and other fields.

## 生产设备 Production equipment

## 图示说明 Graphic description

### 加工用途 Applications

### 螺旋角度 Spiral Angle

### 加工硬度 Work Hardness

### 刀具材质应用 Tool Material Application

### 被加工材料 Processed material

使用硬质合金刀具的目的，就是为了极大的提高时效，所以请使用较高的线速度来进行铣削，推荐在100以上为佳。以线速度100为例，直径8mm来计算刀具的转速S。

The purpose of using carbide cutting tools is to greatly improve the aging, so please use a higher linear speed for milling, it is recommended that more than 100 is better. Take linear speed 100 as an example, diameter 8mm to calculate the speed of the tool S.

$$100 \div 3.14 \div 8 \times 1000 = 3980$$

线速度 (米) Linear velocity (m)	π	刀具刃径 Tool diameter	毫米 mm
			转速 Rotational speed

线速度过低会引起硬质合金刀具的崩刃。

Too low line speed will cause carbide cutting tool breakage.

## 硬质合金铣刀与高速钢铣刀VC对比 Carbide milling cutter and high speed steel milling cutter VC comparison

工件材料 Work material	硬度HRC Hardness HRC	硬质合金刀 Vc/M·min Carbide cutting tool Vc/M·min	高速钢刀 Vc/Mmin High speed steel tool Vc/Mmin
低、中碳钢 Low and medium carbon steel	<200	80~150	21~40

# 目 录

## CONTENT

## XS Series Features XS系列特点

更高的涂层硬度结合低摩擦系数的表面涂层使切削更流畅。

高速高硬精加工.干铣

适用于微加工，适合以下材料牌号：  
42CrMo, Cr12Mov, SKD11, SKD51

## HRC52~68

The higher coating hardness combined with the low friction coefficient surface coating makes the cutting smoother.

High speed and high hardness precision machining. Dry milling

Suitable for microfabrication, suitable for the following material grades: 42CrMo, Cr12Mov, SKD11, SKD51

# XS Series

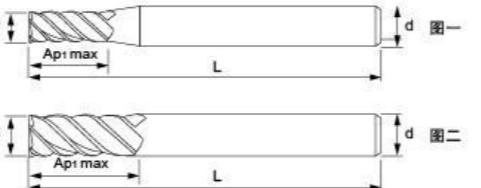

高速高硬铣刀  
High speed high hard  
milling cutter

◆ 为加工高硬度材料设计；

◆ 适于干式切削，高速切削，最新开发的原材料和涂层；

◆ 卓越的工件表面粗糙度；

◆ 由于颈部稍细可以加工深槽；

◆ 极高的耐磨性。

Designed for processing high hardness materials;

Suitable for dry cutting, high-speed cutting, newly developed raw materials and coatings;

Excellent surface roughness of the workpiece;

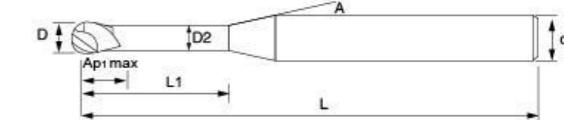

Due to the slightly thinner neck, deep grooves can be machined;

Extremely high wear resistance.

- ◆ 为加工高硬度钢而设计；
- ◆ 在医学、光学、电子和航空航天工业做高精密铣削；
- ◆ 干切削时性能优越；
- ◆ 卓越的高硬度钢切削性能。

It is designed for processing high hardness steel.

High precision milling in the medical, optical, electronic and aerospace industries.

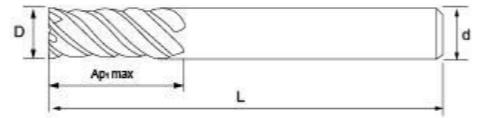

The performance of dry cutting is superior.

The excellent high hardness steel cutting performance.

## XS高速高硬铣刀 XS High speed and high hardness milling cutter

### 强力6刃平刀

Strong 6-flute end mill

碳素钢 Carbon steel	合金钢/工具钢 Alloy steel/tool steel	调质钢 Tempered and tempered steel	淬火钢 Quenched steel	不锈钢 Stainless steel	镍合金 Nickel alloy	钛合金 Titanium alloy	铸铁 Cast iron	铝合金 Aluminum alloy	铜合金 Copper alloy	树脂 Resin

1) 切削深度小时，转速与进给速度可进一步提高。

2) 机床或工件安装刚性差，产生颤、异常声音时，请将上表的转速与进给速度同比例下降。

1) When the cutting depth is small, the speed and feed speed can be further improved.

2) When the machine tool or workpiece installation rigidity is poor, resulting in chatter and abnormal sound, please reduce the speed of the above table in proportion to the feed speed.

# HRC48~58

## XD Series Features XD系列特点

Higher finish and coating density, good red hardness, make the tool super durable.

High Speed.Dry.Milling HRC48~58

Suitable for the following material grades:  
718H, S136H

更高的光洁度和涂层致密度，良好的红硬性，使刀具超级耐用。

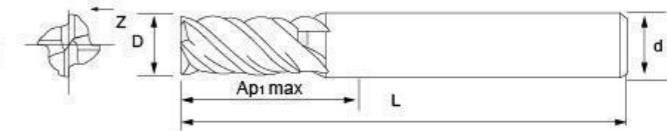

高速.干式铣削 HRC48~58

适合以下材料牌号：  
718H, S136H

**XD**  
Series

**XD高速超耐磨铣刀** High speed and ultra wear-resistant end mill

## **Characteristics of Straight Edge Rough Round Nose Cutting Tools**

Efficient black skin removal, welding scar removal, quenched steel, fast forward cutting for straight blades, round nose end milling cutter.

## 直刃开粗圆鼻刀特点

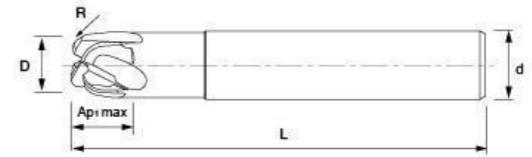

高效去黑皮，去焊疤，淬火钢，快进给直刃开粗，圆鼻立铣刀。

# XC Series

# XC直刃开粗圆鼻刀 Straight blade rough nose cutting tool

**直刃开粗圆鼻刀** Straight blade rough nose cutting tool

Unit:mm

刃径 (D)	R角 (R)	全长 (L)	柄径 (d)	刃数 (F)
6	1.5	50	6	4
8	2	60	8	4
10	2	75	10	4
12	2	75	12	4

**HRC50°以下**

## GT Series Features GT系列特点

Nano multilayer coating protects the cutting edge from heat conduction and wear

Semi-finishing below 50°, with good surface finish and machinability and wear resistance

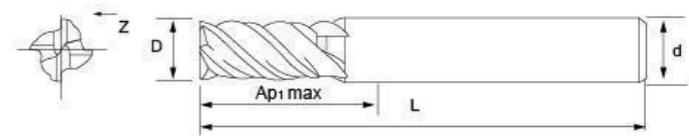

## GT经济型 GT Economical Series

纳米多层涂层使刃口免于导热，  
磨损

50°以下半精加工，具有良好的  
表面光洁度和切削性耐磨性

HT经济型系列特点

高性能的耐磨涂层，高硬性和低导热率

普通钢材，预硬钢，铸铁等粗加工

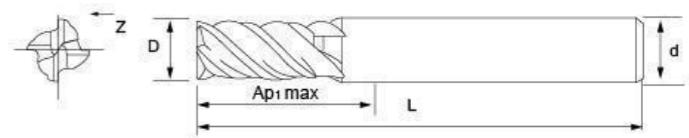

High-performance wear-resistant coating, high hardness and low thermal conductivity

Rough machining of ordinary steel, pre-hardened steel, cast iron, etc.

## HRC35°以下

### TT Series Features TT系列特点

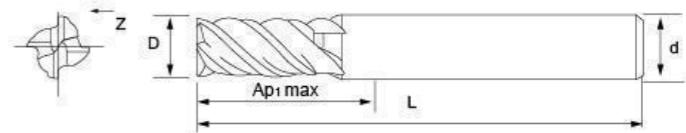

TT series cutting tool base material adopts imported ultra-fine particle high-quality bars, and five axis high-precision grinding machines such as Walter, Sack, and Romantic are used for processing to ensure the consistency of tool size. The coating adopts TiAlN nano coating, with excellent surface finish and extremely high micro hardness and thermal hardness. Suitable for processing stainless steel, heat-resistant steel, and non-ferrous metal materials below HRC50 degrees.

# HRC20~35 °

## U200快进给系列特点

最新AlCr涂层技术，优秀的涂层光洁度和耐磨性

高效大容量U槽排屑，适合加工碳钢，合金钢，软钢，预硬模具钢，合金钢，铁素体不锈钢，奥氏体不锈钢，钛合金，可伐合金

### ✓ $\alpha \neq \beta$ 不等刃设计

$\alpha \neq \beta$  unequal edge design

大不等分设计的，在抑制刀具震动；进行高效率切削的同时，提高加工面的光洁度。

Large unequal design in the suppression of tool vibration; Efficient cutting colleagues to improve the finish of the machined surface.

### ✓ $\theta_1 \neq \theta_2$ 不等导程设计

$\theta_1 \neq \theta_2$  unequal lead design

每个切削刃的导程角变化，抑制震刀；实现优异的精加工面。

The lead Angle of each cutting edge changes to inhibit the shock tool; Achieve excellent finishing surfaces.

### ✓ 最新研发多层涂层设计

Newly developed multi-layer coating design

最新研发的AlCrN基多层涂层，耐磨层+耐热层+微细颗粒硬质合金基体，具备良好的耐磨性、热稳定性和光洁度，适用于高温合金，不锈钢等难加工材料。

The newly developed AlCrN-based multi-layer coating, wear-resistant layer + heat-resistant layer + fine-grained cemented carbide matrix, has good wear resistance, thermal stability and finish, suitable for high-temperature alloy, stainless steel and other difficult materials.

# U200 Series

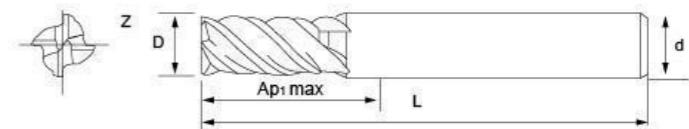

## U200 Rapid Feed Series Features

The latest AlCr coating technology, excellent coating finish and wear resistance

High-efficiency and large-capacity U groove chip removal, suitable for processing carbon steel, alloy steel, mild steel, pre-hardened die steel, alloy steel, ferritic stainless steel, austenitic stainless steel, titanium alloy, Kovar alloy

## MT series mold frame tools features

The contact length between the cutting edge and the workpiece is longer, effectively reducing the load borne by the cutting edge and extending the service life of the milling cutter.

## MT系列模架刀特点

切削刃与工件的接触长度更长，有效降低切削刃所承受的负载，延长铣刀使用时间。

- 采用可变螺旋角加不等分刃设计，带来完美抗振性能，主要针对模架、模框材料加工
- 超大容屑空间获得优异的排屑性能，并同时兼具高速加工性能

Adopting a variable helix angle and unequal blade design, providing perfect vibration resistance, mainly for processing mold base and frame materials  
Super large chip capacity space for excellent chip removal performance while also possessing high-speed machining performance

## HRC20-35

Applied to efficient machining conditions of titanium alloys, high-temperature alloys, stainless steel, difficult to machine materials and other components in the aerospace field, helping customers improve machining efficiency and dimensional accuracy.

### 应用领域 Application field

应用于航空航天领域钛合金、高温合金、不锈钢、难加工材料等零部件的高效加工工况，帮助客户提高加工效率及尺寸精度。

单齿钢用范围螺纹铣刀—避空加长 Single Tooth Range Tungsten Steel Thread Milling Cutter-L1 Extended

P			H				K	M	N				S	
碳素钢 Carbon Steel	合金钢 Alloy Steel	预硬钢 Prehardened Steel	淬火钢 Hardened Steel				铸铁 Cast Iron	不锈钢 Stainless Steels	铝合金 Aluminum Alloys	铜合金 Copper Alloys	塑胶 Plastic Cement	亚克力 Acrylic	高温合金 High Temperature Alloy	钛合金 Titanium Alloy
○	○	○	○				○	○						

■ 合适加工打样件螺纹工件不多、螺纹规格型号多、也可加工美制螺纹  
单扣牙加工阻力小、通用性强使用方便  
避空加长特别适合深孔和螺纹种类复杂的工况

单齿范围螺纹铣刀—钛合金/高温合金 Single Tooth Range Thread Milling Cutter-Titanium Alloy/High Temperature Alloy

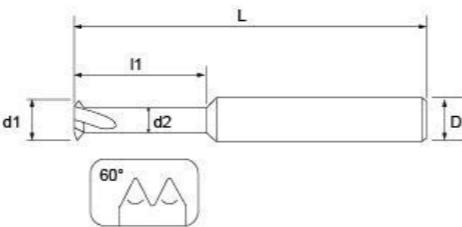

P			H				K	M	N				S	
碳素钢 Carbon Steel	合金钢 Alloy Steel	预硬钢 Prehardened Steel	淬火钢 Hardened Steel				铸铁 Cast Iron	不锈钢 Stainless Steels	铝合金 Aluminum Alloys	铜合金 Copper Alloys	塑胶 Plastic Cement	亚克力 Acrylic	高温合金 High Temperature Alloy	钛合金 Titanium Alloy
○	○	○	○				○	○						○

■ 合适加工打样件螺纹工件不多、螺纹规格型号多、也可加工美制螺纹  
单扣牙加工阻力小、通用性强使用方便  
采用高温合金、钛合金专用涂层,提高了刀具的抗粘屑和高温熔沾问题,从而实现寿命提升

## 单齿DLC七彩铝用范围螺纹铣刀 Single Tooth DLC Seven Color Aluminum Tungsten Steel

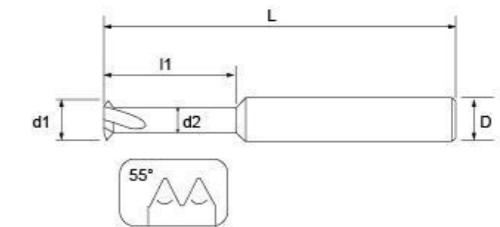

P			H				K	M	N				S	
碳素钢 Carbon Steel	合金钢 Alloy Steel	预硬钢 Prehardened Steel	淬火钢 Hardened Steel				铸铁 Cast Iron	不锈钢 Stainless Steels	铝合金 Aluminum Alloys	铜合金 Copper Alloys	塑胶 Plastic Cement	亚克力 Acrylic	高温合金 High Temperature Alloy	钛合金 Titanium Alloy
~48HRC	~55HRC	~60HRC	~65HRC						○	○	○	○		

适合加工打样件螺纹孔数量不多，螺纹规格多，使用方便，单扣牙加工抗力小，可加工较深的螺纹孔，七彩DLC涂层具有最低的摩擦系数，对非铁金属具有高抗熔结性，抗腐蚀性。  
适合加工铜合金、铝合金、有色金属、亚克力等。

## 三牙螺纹铣刀加工过程 Three threaded iron tool processing process

## 三排牙公制螺纹铣刀-两倍径 Three Tooth Metric Thread Milling Cutter-2D

## 三排牙公制螺纹铣刀-三倍径 Three Tooth Metric Thread Milling Cutter-3D

P			H				K	M	N			S		
碳素钢 Carbon Steel	合金钢 Alloy Steel	预硬钢 Prehardened Steel	淬火钢 Hardened Steel				铸铁 Cast Iron	不锈钢 Stainless Steels	铝合金 Aluminum Alloys	铜合金 Copper Alloys	塑胶 Plastic Cement	亚克力 Acrylic	高温合金 High Temperature Alloy	钛合金 Titanium Alloy
◎	◎	◎	◎	○			◎	◎				○	◎	

适合加工小孔径螺纹和硬度比较高的工件，三扣牙钢性好，强度高，不容易断，灰黑色涂层中间纳米叠层结构具有较高的韧性和高的压应力。特别适合加工碳钢、45号钢、20Cr、S136、40Cr、42Cr、模具钢、淬火钢等。

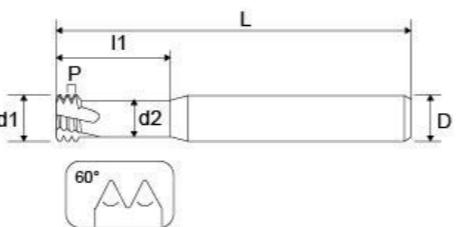

P			H				K	M	N			S		
碳素钢 Carbon Steel	合金钢 Alloy Steel	预硬钢 Prehardened Steel	淬火钢 Hardened Steel				铸铁 Cast Iron	不锈钢 Stainless Steels	铝合金 Aluminum Alloys	铜合金 Copper Alloys	塑胶 Plastic Cement	亚克力 Acrylic	高温合金 High Temperature Alloy	钛合金 Titanium Alloy
◎	◎	◎	◎	○			◎	○				○	◎	

适合加工小孔径螺纹和硬度比较高的工件，三扣牙刚性好、耐磨性高、螺纹尺寸更加稳定，采用AlTiSiN基层涂层，含铝、钛、硅、氮等多种复合元素，其中含有较高的铝元素，具有较高的润滑效果，特别适合加工不锈钢等通用钢件。

### 三排牙公制螺纹铣刀-古铜色涂层 Three Tooth Metric Thread Mills-Bronze Coating

P			H			K	M	N			S		
碳素钢 Carbon Steel	合金钢 Alloy Steel	预硬钢 Prehardened Steel	淬火钢 Hardened Steel			铸铁 Cast Iron	不锈钢 Stainless Steels	铝合金 Aluminum Alloys	铜合金 Copper Alloys	塑胶 Plastic Cement	亚克力 Acrylic	高温合金 High Temperature Alloy	钛合金 Titanium Alloy
<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>			<input type="radio"/>	<input type="radio"/>						

适合加工小孔径螺纹和硬度比较高的工件、三扣牙刚性好、强度高，不容易断。

### 三排牙公制螺纹铣刀-七彩铝用 Three Tooth Metric Thread Milling Cutter-Colorful Aluminum

P			H			K	M	N			S		
碳素钢 Carbon Steel	合金钢 Alloy Steel	预硬钢 Prehardened Steel	淬火钢 Hardened Steel			铸铁 Cast Iron	不锈钢 Stainless Steels	铝合金 Aluminum Alloys	铜合金 Copper Alloys	塑胶 Plastic Cement	亚克力 Acrylic	高温合金 High Temperature Alloy	钛合金 Titanium Alloy
<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>			<input type="radio"/>	<input type="radio"/>						

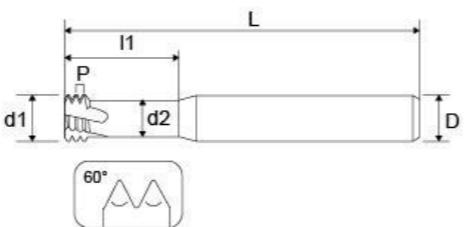

七彩DLC涂层具有最低的摩擦系数,对非铁金属具有高抗熔结性,抗腐蚀性。

适合加工铜合金、铝合金、有色金属、亚克力等。

## 公制超硬二排牙螺纹铣刀 Metric Super Hard Two-Row Thread Milling Cutter

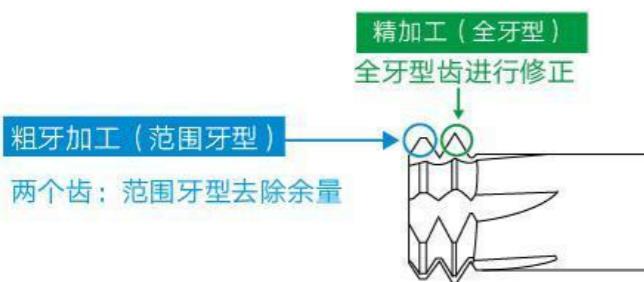

P			H				K	M	N				S		
碳素钢 Carbon Steel	合金钢 Alloy Steel	预硬钢 Prehardened Steel	淬火钢 Hardened Steel				铸铁 Cast Iron	不锈钢 Stainless Steels	铝合金 Aluminum Alloys	铜合金 Copper Alloys	塑胶 Plastic Cement	亚克力 Acrylic	高温合金 High Temperature Alloy	钛合金 Titanium Alloy	
◎ 最佳 Best	○ 适合 Good		~48HRC	~55HRC	~60HRC	~65HRC									

■ 第一排矮齿用来初加工,第二排牙齿精加工完成螺纹。刀具左旋设计,主轴需要反转加螺旋切削让刀增加切削力度。合适加工48HRC以上淬火钢模具等高硬材料。

### 三合一钻铣螺纹铣刀加工过程：

### 三合一钻铣螺纹铣刀加工过程：

## Polarizer special milling cutter

Adopting alloy tungsten steel as the base material, it has higher wear resistance and strength, and is a specialized tool for high hardness and high-speed cutting applications.

It can achieve layered cutting of polarizers, reduce tool changing time, and ensure high sharpness of spiral cutting edges. The cutting surface is smooth and free of burrs and dark lines.

### 偏光片专用铣刀特点

采用合金钨钢母材，具有更高的耐磨性和强度，属于高硬度高速切削应用的专属刀具。

可以达到偏光片叠层切割，减少换刀时间，螺旋刃口锋利度高排屑好。切割表面光滑无毛刺无暗纹起线。

Polarizer special milling cutter

## Aluminum Special

Ultra-thin chemical coating, high temperature resistance and low friction

Large-capacity U-shaped chip flute, high-efficiency chip removal, high mirror edge and chip flute, no chips during processing.

### 铝专用系列特点

超薄化学涂层，耐高温低摩擦性

大容量的U型排屑槽，高效排屑，高镜面的刃口和排屑槽，在加工过程中不留屑。

#### ✓ DLC 涂层摩擦系数小,铝金属不易熔敷

DLC coating friction coefficient is small, aluminum metal is not easy to melt

采用具有高硬度、低摩擦系数、耐磨性等特性的DLC(类金刚石)涂层技术，可进行铝合金干式加工，加工时不易产生积削瘤

DLC(diamond-like) coating technology with high hardness, low friction coefficient, wear resistance and other characteristics can be used for dry processing of aluminum alloy, and it is not easy to produce a chip during processing

#### ✓ 加工表面光洁度高

High finish of the machined surface

刀具刃口做特殊处理，结合DLC涂层，可实现高光洁度表面加工

The cutting edge of the tool is specially treated and contains DLC coating to achieve high finish surface processing

#### ✓ 排屑效果好,加工效率高

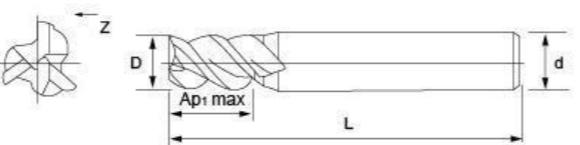

Good chip removal effect, high processing efficiency

通过低摩擦系数的DLC涂层和较低的芯厚值、高扭力、大倾角、为切削排出设置转折点的切削刃，使切削附着少、排出性能优越，可实现高效率加工

With low friction coefficient DLC coating and low core thickness, high torque, large inclination Angle, cutting edge setting turning point for cutting discharge, the cutting attachment is less, the discharge performance is superior, and high efficiency machining can be achieved

**铝** 专用  
Aluminum Dedicated series

12	12	45	100	220

**钻头系列特点**

**Drilling Series Features**

改良的涂层使刀具表面更硬更滑更耐热，切削性能得到显著的提升

具有更高的强烈断屑，更高的寿命，更高的精度轻松切削

◆ 普通槽形 Plain groove

◆ 优化槽形 Optimized groove shape

- 更高的钢性 Higher stiffness
- 更优良的排屑性能 Better chip removal performance

**新的钻尖工艺 New drill point process**

新的钻尖和主切削刃保证了切削力的均匀分布并适当增加了锋利性，因此降低了切削阻力和扭矩，优化了切削性能。

The new drill point and main cutting edge ensure an even distribution of cutting forces and an appropriate increase in sharpness, thereby reducing cutting resistance and torque and optimising cutting performance.

**排屑性能更佳 Better chip removal performance**

新工艺增加了排屑槽的表面平滑程度，光滑平整的表面提高了刀具排屑和散热的性能。

The new process increases the surface smoothness of the chip discharge groove, and the smooth and flat surface improves the performance of the tool chip discharge and heat dissipation.

**改良涂层工艺 Improved coating process**

改良的涂层设备使得刀具表面更硬更滑更耐热，切削性能得到显著提升。

The improved coating equipment makes the tool surface harder, smoother and more heat resistant, and the cutting performance is significantly improved.

**刀具寿命提高 Improved tool life**

新工艺在强度不变的前提下增强了刀具的整体刚性，提高了尺寸稳定性及刀具寿命。

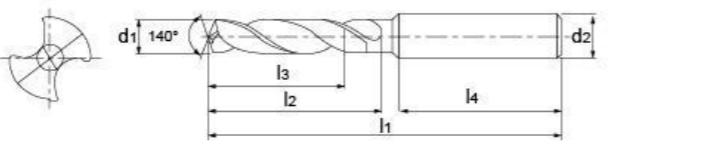

The new technology enhances the overall rigidity of the tool, improves the dimensional stability and the tool life without changing the strength.

The improved coating makes the tool surface harder, slippery and heat resistant, and the cutting performance is significantly improved

With higher strong chip breaking, higher life, higher precision and easy cutting

## For graphite, zirconia 石墨.氧化锆专用

采用高密度，高熔点的金刚石涂层，具有良好的稳定性和耐磨性

广泛适用于石墨及医疗氧化锆和合金非铁材质

### ① 柄径公差h5

- Handle diameter tolerance h5
- h5高精度柄径公差，使加工精度更高。
- h5 High precision handle diameter tolerance for higher machining accuracy.

### ② HD多层高硬度涂层

- HD multi-layer high hardness coating
- 最新研发的HD多层高硬度涂层，耐热层+耐磨层等多层涂层，显著提高刀具的加工寿命

The newly developed HD multi-layer high-hardness coating, heat-resistant layer + wear-resistant layer and other multi-layer coating significantly improves the processing life of the tool.

**4刃平刀**  
4-flutes end mill

### ③ 超微颗粒硬质合金

- Micro granular carbide
- 棒料采用0.3 μm超微颗粒硬质合金，具有超高的耐磨性和强度，在高硬度材料的高速加工中获得超高的加工寿命。

The bar material is made of 0.3μm ultrafine granular cemented carbide, which has ultra-high wear resistance and strength, and obtains ultra-high processing life in high-speed processing of high-hardness materials.

### ④ 特殊前角设计

- Special front corner design
- 针对高硬度钢做特殊前角设计，兼具耐磨性和锋利性，在加工中提高加工寿命的同时抑制毛刺产生。

Special front Angle design for high hardness steel, both wear resistance and sharpness, improve the processing life while inhibiting bur production.

### 大圆弧后角设计

Large arc back Angle design

大圆弧后角使高效率加工高硬度钢件时提供完美的支撑，提高工作效率。

The large arc rear Angle provides perfect support for high-efficiency processing of high-hardness steel parts and improves processing efficiency.

### 大芯厚设计

Large core thick design

大芯厚设计使刀具刚性更强，加工稳定性更好。

Large core thick design makes the tool more rigid, better processing stability.

采用高密度，高熔点的金刚石涂层，具有良好的稳定性和耐磨性

广泛用于石墨及医疗氧化锆和合金非铁材质

Widely used in graphite and medical zirconia and alloy non-ferrous materials

• 较高硬度的涂层和优秀的耐磨性极大地提高了工具寿命；

• 极细薄膜能够确保被加件表面光滑性及良好的表面粗糙度；

• 在加工石墨等具有高性能。

Higher hardness coating and excellent wear resistance greatly improve tool life.

The thin film can ensure the smooth surface and good surface roughness of the additives.

It has high performance in processing graphite and so on.

## 1 关于石墨刀具 About Graphite tools

与铜电极相比，石墨电极具有电极消耗小、加工速度快、机械加工性能好、加工精度高、热变形小、重量轻、表面处理容易、耐高温、加工温度高、电极可粘结等优点。

尽管石墨是一种非常容易切削的材料，但由于用作EDM电极的石墨材料必须具有足够的强度，以免在操作和EDM加工过程中受到破坏，同时电极形状（薄壁、小圆角、锐变等）也对石墨电极的晶粒尺寸和强度提出了较高要求，这导致在加工过程中石墨工件容易崩碎，刀具容易磨损。

刀具磨损是石墨电极加工中最重要的问题。磨损不仅影响刀具损耗费用、加工时间、加工质量，而且影响电极EDM加工工件材料的表面质量，是优化高速加工的重要参数。

石墨电极材料加工的主要刀具磨损区域为前刀面和后刀面。在前刀面上，刀具与破碎切削区的冲击接触产生冲击磨粒磨损，沿工具表面滑动的切削产生滑动摩擦磨损微磨。

Compared with the copper electrode, the graphite electrode has the advantages of small electrode consumption, fast processing speed, good machining performance, high processing accuracy, small thermal deformation, light weight, easy surface treatment, high temperature resistance, high processing temperature, and the electrode can be bonded.

Although graphite is a very easy material to cut, because the graphite material used as an EDM electrode must have enough strength to avoid damage during operation and EDM processing, at the same time, the electrode shape (thin wall, small corner, sharp, etc.) also puts higher requirements on the grain size and strength of the graphite electrode, which leads to the graphite workpiece easy to break during processing. Knives wear easily.

Tool wear is the most important problem in graphite electrode machining. The amount of wear not only affects the tool loss cost, machining time, machining quality, but also affects the surface quality of electrode EDM machining workpiece material, which is an important parameter to optimize high-speed machining.

The main tool wear areas of graphite electrode material processing are the front and back tool surfaces. On the front tool surface, the impact contact between the tool and the broken cutting zone results in impact wear, and the sliding friction wear is dominated by the sliding cutting along the tool surface.

## 3 石墨刀具涂层 Graphite tool coating

金刚石涂层刀具有硬度高、耐磨性好、摩擦系数低等优点。

现阶段，金刚石涂层是石墨加工刀具的最佳选择，也最能体现石墨刀具的优越性能。金刚石涂层硬质合金刀具的优点是：综合了天然金刚石的硬度和硬质合金的强度及断裂韧性。但是，目前国内，金刚石涂层技术还处在起步阶段，还有成本的投入也很大，所以金刚石涂层在近期不会有太大发展。不过，我们可以在普通刀具的基础上，优化刀具的角度、选材和改善普通涂层的结构，在某种程度上，还是可以在石墨加工中应用的。

金刚石涂层刀具与普通涂层的几何角度有本质区别，因此，在设计金刚石涂层刀具时，由于石墨加工的特殊性，其几何角度可适当放大，容屑槽也变大，而不会降低刀具刃口的耐磨性。对于普通的TiAlN涂层，虽然与无涂层刀具相比，其耐磨性有显著提高，但比起金刚石涂层来说，在加工石墨时其几何角度应适当减小，以增加其耐磨性。

Diamond coated tool has the advantages of high hardness, good wear resistance and low friction coefficient.

At this stage, diamond coating is the best choice for graphite processing tools, and it can best reflect the superior performance of graphite tools. The advantage of diamond-coated carbide cutting tools is that it integrates the hardness of natural diamond and the strength and fracture toughness of cemented carbide. However, at present in China, diamond coating technology is still in its infancy, and the cost of investment is very large, so diamond coating will not have much development in the near future. However, on the basis of ordinary tools, we can optimize the angle of the tool, material selection and improve the structure of the ordinary coating, and to a certain extent, it can still be applied in graphite processing.

The geometric angle of diamond-coated tools is fundamentally different from that of ordinary coatings. Therefore, when designing diamond-coated tools, due to the particularity of graphite processing, the geometric angle can be properly amplified and the chip sink is also

larger, without reducing the wear resistance of the cutting edge of the tool. For ordinary TiAlN coatings, although the wear resistance is significantly improved compared with uncoated tools, compared with diamond coatings, the geometric angle should be appropriately reduced when processing graphite to increase its wear resistance.

## 2 石墨刀具材料 Graphite tool material

刀具材料是决定刀具切削性能的根本因素，对于加工效率、加工质量、加工成本以及刀具耐用度影响很大。刀具材料越硬，其耐磨损越好，硬度越高，冲击韧性越低，材料越脆。

硬度和韧性是矛盾的，也是刀具材料所应解决的一个关键问题。

对于石墨刀具，普通的TiAlN涂层可在选材上适当选择韧性相对好一点的，也就是钴含量稍高一点的；对于金刚石涂层石墨刀具，可在选材上适当选择硬度相对高一点的，也就是钴含量低一点的。

Tool material is the fundamental factor that determines the cutting performance of the tool, which has a great impact on the processing efficiency, processing quality, processing cost and tool durability. The harder the tool material, the better its wear resistance, the higher the hardness, the lower the impact toughness, the more brittle the material. Hardness and toughness are contradictory, and it is also a key problem that the tool material should solve.

For graphite tools, the ordinary TiAlN coating can be properly selected in the selection of materials with relatively good toughness, that is, the cobalt content is slightly higher; For diamond coated graphite tools, the hardness of the material can be selected appropriately, that is, the cobalt content is low.

## 4 刀口钝化 The cutting edge is blunted

刀具刃口钝化技术是一个还不被人们普遍重视，而又是十分重要的问题。它之所以重要就在于：经钝化后的刀具能有效提高刃口强度、提高刀具寿命和切削过程的稳定性。大家知道刀具是机床的“牙齿”，影响刀具切削性能和刀具寿命的主要因素，除了刀具材料、刀具几何参数、刀具结构、切削用量优化等，通过大量的刀具刃口钝化实践体会到：有一个好的刃口形式和刃口钝化质量，也是刀具能否良好切削加工的前提。因此，刀具刃口的状况好坏也是不可忽视的因素。大家还要重视钨渣回收的前景。

有称“刃口钝化”、“刃口强化”、“刃口珩磨”、“刃口准备”或“ER处理”等，刀具刃口的钝化是一个还不被人们普遍重视，而又十分重要的问题。用金刚石砂轮刃磨后的硬质合金刀具切削，存在程度不同的微观缺口（即微小崩刃与锯齿）。石墨的高速切削加工对刀具性能和稳定性提出了更高的要求，特别是金刚石涂层刀具，在涂层前必须经过刀口钝化处理，才能保证涂层的牢固性和使用寿命。刀具钝化的目的，就是解决刀具刃磨后的刃口微观缺口的问题，减小其锋利度，达到光滑平整，既坚固又耐用的目的。

切削加工条件的选择对于刀具寿命有相当大的影响。

切削方式  
顺铣的切削振动小于逆铣。顺铣时，刀具切入厚度从最大减小到零，刀具切入工件后，不会出现因切下切屑而造成的弹刀现象，工艺系统刚性好，切削振动小；逆铣时，刀具的切入厚度从零增加到最大，刀具切入初期，因切削厚度薄，将在工件表面划擦一段路径，此时，刃口如果遇到石墨材料中的硬质点或残留在工件表面的切屑颗粒，都将引起刀具的弹刀或颤振，因此逆铣的切削振动较大。

吹气（或吸尘）和浸渍电火花液加工  
及时清理工件表面的石墨粉尘，有利于减小刀具二次磨损，延长刀具使用寿命，减少石墨粉尘对机床丝杠和导轨的影响。

The technology of tool edge passivation is a very important problem which has not been paid attention to by people. It is important that the tool after passivation can effectively improve the strength of the cutting edge, improve the tool life and the stability of the cutting process. We all know that the tool is the “teeth” of the machine tool, the main factors affecting the cutting performance and tool life, in addition to the tool material, tool geometric parameters, tool structure, cutting parameters optimization, etc., through a large number of tool passivation practice to realize that there is a good cutting edge form and passivation quality, but also the premise of good cutting tool processing. Therefore, the condition of the cutting edge of the tool is also a factor that cannot be ignored. We should also pay attention to the prospects of tungsten slag recovery.

There are called “edge passivation”, “edge strengthening”, “edge honing”, “edge preparation” or “ER treatment”, etc., the passivation of tool edge is a problem that has not been generally paid attention to, but is very important. After grinding the carbide cutting edge with diamond grinding wheel, there are different degrees of micro-notch (that is, small collapsing edge and serrations). The high-speed cutting of graphite has put forward higher requirements for the performance and stability of the tool, especially the diamond coated tool, which must be passivated before the coating to ensure the robustness and service life of the coating. The purpose of the tool passivation is to solve the problem of the micro-notch of the cutting edge after the tool grinding, reduce its sharpness, and achieve the purpose of smooth and strong, both strong and durable.

The choice of cutting conditions has a considerable influence on the tool life.  
Cutting mode

The cutting vibration of up milling is smaller than that of up milling. When milling, the cutting thickness of the tool is reduced from the maximum to zero. After cutting the tool into the workpiece, there will be no springknife phenomenon caused by not cutting the chip. The process system is rigid and the cutting vibration is small. During the inverse milling, the cutting thickness of the tool increases from zero to the maximum, the early cutting tool, due to the thin cutting thickness, will scratch a path on the surface of the workpiece, at this time, if the cutting edge encounters the hard point in the graphite material or the debris particles remaining on the surface of the workpiece, it will cause the knife or flutter of the tool, so the cutting vibration of the inverse milling is larger.

Blowing (or vacuuming) and impregnating EDM machining

Timely cleaning of the graphite dust on the surface of the workpiece is conducive to reducing the secondary wear of the tool, extending the service life of the tool, and reducing the influence of graphite dust on the lead screw and guide rail of the machine tool.

## 60°,90°,120°Fixed point drill

● Good guide bit, can make the machining hole positioning accuracy within 0.015mm;

● Select the high-performance chromium base composite coating suitable for drill, improve the lubrication, heat resistance and wear resistance of the tool processing, and improve the shear strength of the tool, so that the tool can achieve a stable and high life in the processing of a variety of materials.

● Selected more economical and excellent performance of cemented carbide as the matrix, so that the tool processing is stable and has a high cost performance.

● Good sharpness cutting edge, so that the fixed point drill to meet the processing needs of different occasions such as centering, chamfering, V-groove processing, chamfering and so on.

## 60 ° 90 ° 120 ° 定心钻

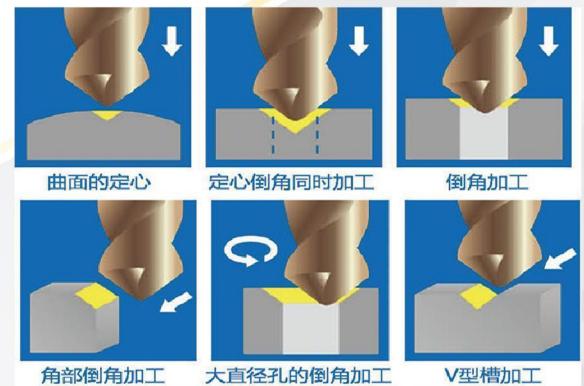

● 引导性好的钻头，可使加工孔的定位精度达到0.015mm以内；

● 精选适合钻头的高性能铬基复合涂层，提高刀具加工的润滑性，耐热性和耐磨性，并提高刀具切削强度，使刀具在加工多种材料均能达到稳定的高寿命。

● 精选较经济且性能优异的硬质合金作为基体，使刀具加工稳定且有很高的性价比。

● 锋利度好的切削刃，使该定点钻满足定心、倒角、V型槽加工、倒边等不同场合的加工需求。
